Many natural and skier triggered wind slabs in Bridgers

Bridger Range
3/10/2020
Code
SS-AS
Aspect
E
Latitude
45.77010
Longitude
-110.94000
Notes

Observations from Bridger Ski Patrol:

"At 10:30 am natural avalanches were reported Between the Peaks of Saddle, in Argentina Bowl, and on Bridger Peak. At 11am a solo skier trigger an avalanche on the north peak of Saddle with a cornice drop. Shortly after, skier triggered avalanches were reported to the north, in Peter's Point, and Barny and Gibbs."

From a skier:

"Really touchy windslab formation throughout the day. 6-12 in slabs running on freeze crust."

Number caught
0
Number buried
0
Avalanche Type
Soft slab avalanche
Trigger
Skier
Problem Type
Wind-Drifted Snow
