45.03030

Longitude

-109.99800

Notes

From an email:

"Chris and I toured up the East Ridge of Mineral today and dug a pit on a NE [aspect](#) around 9000'. HS 75 cm, mostly facets with the exception of the new snow. ECTX. We found more of a windslab on some more exposed features although it wasn't reactive for us and we saw no natural avalanches with the exception of a small [slide](#) in the [couloir](#) skier's left of the summit of Meridian. We were still a ways away but it appeared to have run on the old/new snow interface."
