Small skier triggered avalanche near Mt Blackmore Trail, Hyalite

Mt Blackmore Northern Gallatin 1/1/2020 Code ASu-R0-D1 Elevation 9000 Aspect NW Latitude 45.44730 Longitude -110.99900 Notes

From an email:

"Also observed a recent <u>slide</u> on the northwest face of elephant, at about 9000 feet, in the second elephant glade along the blackmore trail. Wind pocket looked to be triggered by a skier on their way out, maybe 30 feet wide, ran for a 80 feet. Looks like they stayed high, just below a rock band on their exit and cut the <u>wind slab</u>."
