

Loose snow avalanches on Blackmore

Mt Blackmore
Northern Gallatin
10/23/2020
Code
L-N-O
Aspect
E
Latitude
45.44440
Longitude
-111.00400
Notes

Today I skinned in and skied around the E side of the N ridges coming down off of Blackmore. The snow is about 2' deep off of the ridge down to the bottom of the bowl on the east faces, with variations where the wind has loaded/stripped the snow. The wind was gusting out of the N/NW/W. I observed some natural loose dry sluffs on the N face and the E face off the N ridge. They look like they came down in the last 24 hours with this new snow and wind; they were still fairly defined when I saw them.

Number of slides
1
