

Independence mine rd/ Boulder river

Date

Sun, 12/27/2020 - 12:00

Activity

Snowboarding

Snowmobiling

Took a snowmobile up towards independence mine along with split boards. On our way up we felt the snowpack structure was poor so we stayed of steep slopes. We dug a pit on a sw facing slope at 8300' and found the same weak facet layer on the ground with a facet, melt freeze crust, facet sandwich. We got a ctv, and a ectp11

Region

Out of Advisory Area
