

Island Park South West Aspect Tyler Creek Area

Date

Sat, 01/02/2021 - 17:41

Activity

Snowmobiling

Seemingly unsafe snowpack here in island park. A few very firm crust layers. One facet layer near the base which propagated. Two crust layers, both knife hardness, were stacked in each other with a small amount of facets between them. This layer went on CTE 8. I wasn't able to attach it but I will send it separately. We weren't in avalanche terrain today so there were no other observations.

Region

Island Park

Location (from list)

Centennials - Idaho

Observer Name

Christian Davidson
