

From Big Sky Ski Patrol: "Temps remained a little cooler than yesterday and generally topped out in the mid 40's F. That didn't stop the free water from moving and continuing to destabilize the snowpack, primarily on solar aspects below 10,000'. Near full depth to full depth wet loose avalanches continued to naturally release in what was left of the A-Z's as well as LRT which had not seen any activity yesterday." Photo: BSSP
