

Pebble Creek

Date

Mon, 01/22/2024 - 11:25

Activity

Skiing

Still experiencing whumphing, and cracking along the skin track. Tracks from 24 hrs ago had filled in from wind. Wind today was 3-6 mph at 8900'. HS at 8900', exposed ridge = 30" deep. We saw 2 slides a couple days old? One was either natural or possibly remotely triggered by skiers this weekend (photo attached). SE aspect, about 9000' elev.

Temp was 28° up high, 38° at highway. Ski out from switchbacks down was sticky.

Region

Cooke City

Location (from list)

Pebble Creek - YNP
