

We Triggered a Small Avalanche

Date

Thu, 03/28/2024 - 11:05

Activity

Skiing

Snowmobiling

Today, we skied near the wilderness boundary north of Round Lake. On a wind-loaded test slope at the top of our second ski run, we were able to get recent drifts to crack, but not avalanche. Slightly further down on a steep roll the second skier in our group triggered a small [wind slab](#) avalanche. This avalanche was 15-20' wide, 8" deep, and ran for about 30-40 vertical feet. The skier easily skied away from the [slide](#) and was not caught.

Winds remained mostly calm but increased by the end of the day. Snowfall through the day was enough to partially cover our morning tracks and we found 2" of snow on our snowmobiles at the end of the day.

Region

Cooke City

Location (from list)

Round Lake
