

Cracking and wind slab formation at Bridger

Bridger Bowl
Bridger Range
11/23/2024
Code
Latitude
45.81560
Longitude
-110.92300
Notes

Wind was ripping on the ridge and creating hard wind slabs 3-6" in depth. Without much new snow to transport they weren't very large or widespread, but we got cracking and [propagation](#) on a steeper terrain feature (Hidden) near the ridge that led to us skiing a different line. The [slab](#) development was also found in isolated areas further down from the ridge in cross loaded gullies, but slabs were isolated to breaking at the skis.
