

Bear Basin Snowpit

Date

Tue, 11/26/2024 - 13:35

Activity

Skiing

It was snowing heavily around noon when we left the Beehive parking lot but didn't last long. Light snowfall throughout our tour, 2cm of new snow on the skin track. Light wind at the ridgeline. No obvious signs of instability. We skied partway into Bear Basin, dug at the top of that steep rollover halfway down. HS 65, 8600', NE80. Got ECTP13 on a layer of facets about 25cm up from the ground above a decomposing ice crust.

Region

Northern Madison

Location (from list)

Bear Basin

Observer Name

Spence Jonas
