Reactive Storm Slabs near Upper Brackett Creek

Ross Peak Bridger Range 2/5/2025 Code SS-ASr-R1-D1 Elevation 7200 Aspect SE Latitude 45.86270 Longitude -110.93600 Notes

New storm snow accumulating over the course of the morning became quite reactive once we descended out of the inversion. Significant change starting around 7,200', where the surface had remained cold. We didn't observe any signs of instability while skiing between \sim 8,200' and \sim 7,200'.

Photo is a of <u>remote trigger</u>, SE facing slope, ~100' crown, ~3" depth. Lots of shooting cracks and smaller remote triggers while touring out the FS roads.
