

Stable Snow on Ellis

Date

Thu, 04/03/2025 - 14:15

Activity

Skiing

My ski partner and I toured up Ellis today and skied the typical east facing gullies.

We found the new snow to be bonding well to the crust and no significant instabilities within the new snow. Light snowfall off and on throughout the day, total accumulation no more than 0.5in, sky broken to obscured. Excellent skiing above 7K

Region

Northern Gallatin

Location (from list)

Mt Ellis

Observer Name

Lael Butler
